

Cat Breed Classifier

This project is to train image classifier model to classify Cat Breeds dataset images. It has frontend as web application showing Quiz which allow user to take on guessing cat breed on the images.

Then after user pick answer, it will show result comparing user's with ChatGPT-4o-mini (OpenRouter API key required) and 4 Deep Learning Models. The rationale of LLM and GradCAM has been implemented to show model interpretability.

<p>Your Answer</p> <p>British Shorthair ✓ Correct!</p>	<p>ChatGPT-4o-mini Answer (1.53 seconds)</p> <p>British Shorthair ✓ Correct!</p> <p>The cat appears to have a stocky build and round face with short fur, which are characteristics typical of the British Shorthair breed.</p>	<p>Classification Model Answer (0.10 seconds)</p> <p>I don't know ✗ Incorrect!</p> <p>The correct answer was: British Shorthair</p> 
<p>ResNet Model Answer (0.11 seconds)</p> <p>Persian ✗ Incorrect!</p> <p>The correct answer was: British Shorthair</p> 	<p>EfficientNet Model Answer (0.43 seconds)</p> <p>British Shorthair ✓ Correct!</p> 	<p>VGG Model Answer (0.13 seconds)</p> <p>I don't know ✗ Incorrect!</p> <p>The correct answer was: British Shorthair</p>

[NEXT QUESTION](#)

Data Sets

- Dataset is from Kaggle from 'Geno Cat Breed Image Collection' dataset (url: <https://www.kaggle.com/datasets/shawngano/gano-cat-breed-image-collection>)
- Contains 15 cat breeds with 375 photos for each breed (total 5,625 photos)
- Preprocessing step
 - Resize to 256x256
 - Random Crop to 224x224
 - Random Horizontal Flip
 - Random Rotation
 - Convert to Tensor
 - Normalize with mean and std of ImageNet

Model Architecture

Custom Model (1 Model)

1. CNN Model

- 5 Convolutional Layers
- 2 Fully Connected Layers
- 1 Dropout Layer in between the two FC Layers

        return eff_model

```

Training

All 4 models has been trained using same hyperparamters for comparison.

- Training Batch Size: 128

- Epochs: 20 for CNN model and 10 for transfer learning models.
- Loss Function: Cross Entropy Loss
- Optimizer: SGD
 - Learning Rate: 0.01 for CNN model and 0.001 for transfer learning models.
 - Momentum: 0.9

After finish training model saved to .pth for later used for inference result on Cat Quiz program.

 classification_model.pth	65,514 KB	PTH File
 efficientnet_model.pth	30,830 KB	PTH File
 resnet_model.pth	43,818 KB	PTH File
 vgg_model.pth	524,734 KB	PTH File

Below code is from src\model_train.py use in training all 4 models.

- CatBreedDataSet = Custom Dataset for Kaggle Cat Breed dataset
- get_cat_breed_dataset = function to create new catbreed dataset for training.

training_time
```

Result and Evaluation

- While models were trained directly in application, both training and validation accuracy/loss will be kept for visualization in web application later. Below chart shows training and validation accuracy/loss for each model that captured directly from web application.

Visualization and Interpretability

- GradCAM has been implemented for each models.
 - Color will gradient from Blue(0%) -> Cyan(25%) -> Green(50%) -> Yellow(75%) -> Red(100%) impact to features that CNN layer consider.
- Code below show GradCAM implemented on CNN Layer selection for each model from src\model_train.py

```
target_layer = None

if model_name == Models.ClassificationModel:
    # For custom CNN, use the last conv layer in conv_block
    target_layer = original_model.conv_block[-3] # Get the last Conv2d before the final MaxPool
elif model_name == Models.ResNetModel:
    # For ResNet, use the last layer in layer4
    target_layer = original_model.layer4[-1].conv2
elif model_name == Models.EfficientNetModel:
    # For EfficientNet, use the last conv layer in features
    target_layer = original_model.features[-1][0]
elif model_name == Models.VGGModel:
    # For VGG, use the last conv layer in features
    for module in original_model.features:
        if isinstance(module, nn.Conv2d):
            target_layer = module
```

Conclusion

- In this project, we have created a web application using Flask framework. This application uses PyTorch to train and evaluate models for different cat breeds. We have used a custom CNN, ResNet, EfficientNet, and VGG models.
- We have also implemented GradCAM to visualize the model's feature importance.
- The trained models have been saved as PyTorch models for later use.
- The application has been designed to be easily scalable and adaptable to different cat breed datasets.
- The application also provides an easy-to-use interface for users to upload images and view the model's predictions.
